OUR HISTORY

Elite Investment and Trading Group has been offering brokerage services since 2005 and is currently the fastest-growing broker.

In 2022 Elite Investment and Trading Group made investing available to all and has continued to set the pace with its latest technologies.

**WORKING WILL FILL
YOUR POCKETS,
INVESTING WILL
BRING YOU WEALTH!**

ABOUT US

Elite Investment and Trading Group is an Artificial Intelligence crypto trading platform for everyone; managing trading accounts for investors through trading robots and live traders providing it's traders with the access to major markets like currencies, indices, commodities, and shares to control risks. It is a convenient solution for those who want to profit from either weekly profits on investment capital and from long-term investments in crypto assets. We have passed the technological and legal audit. We are a company striving to present innovative fintech products for our investors to earn in market growth and trade cryptocurrencies and tokenized assets.

Founder, Ling HUANG has generated the all new FQ10-SSD multi-core A.I system yet to record a loss and has continued to set the pace with its latest technologies.

E-GlobalFunds is a global investment powerhouse. We began our operations in 2005 and have grown due to excellent relationships with our clients. We started out small, with just a few private investors.

We achieved our success because of how successfully we integrate with our clients. One complaint many people have about investing is that they can be unstable. Investors fear instability which slows down returns. Our clients face no such issues. But we have helped them get away with these obvious challenge by our seasoned professional team.

THE E-GLOBALFUNDS APPROACH

Elite Investment & Trading Group Limited approaches every client's business as if it were our own. We believe a Investment management firm should be more than an advisor and risk manager. We put ourselves in our clients' shoes, align our incentives with their objectives, and collaborate to unlock the full potential of their business. This builds deep and enjoyable relationships. The right approach is necessary for the right outcome.

NET ASSETS UNDER MANAGEMENT

Investing in Precious Metals

There are many ways to buy into precious metals like gold, silver, and platinum, and a host of good reasons why you should give in to the treasure hunt. So if you're just getting started out in precious metals, read on to learn more about how they work and how you can invest in them.

Gold and silver have been recognized as valuable metals, and have been coveted for a long time. Even today, precious metals have their place in a savvy investor's portfolio. But which precious metal is best for investment purposes? And why are they so volatile?

Precious metals can be a good portfolio diversifier and hedge against inflation - but gold, perhaps the most well-known such metal, is not the only one out there for investors.

Silver, platinum, and palladium are all commodities that can be added to your precious metals portfolio, and each have their own unique risks and opportunities.

In addition to owning physical metal, investors can gain access through the derivatives market, metal ETFs and mutual funds, and mining company stocks.

"Precious metals offer unique inflationary protection—they have intrinsic value, they carry no credit risk, and they cannot be inflated."

That means you can't print more of them. They also offer genuine "upheaval insurance" against financial or political/military upheavals. From an investment theory standpoint, precious metals also provide low or negative correlation to other asset classes like stocks and bonds. This means even a small percentage of precious metals in a portfolio will reduce both volatility and risk.

Risks of Investing in Precious Metals

Every investment comes with its own set of risks. Although they may come with a certain degree of security, there is always some risk that comes with investing in precious metals. Prices for metals can drop during times of economic certainty, putting a damper for people who like to invest heavily in the precious metals market. Selling may be a challenge during times of economic volatility, as prices tend to shoot up. Finding a buyer for physical metals may be difficult. Another risk to precious metals prices includes the issue of supply. When demand shoots up, the existing supply may begin to deplete. And that means producers will have to bring more of each metal into the market. If there is a short supply of mineable metals, that could put pressure on prices.

The Bottom Line

Precious metals provide a useful and effective means of diversifying a portfolio. The trick to achieving success with them is to know your goals and risk profile before jumping in.

"The volatility of precious metals can be harnessed to accumulate wealth. Left unchecked, it can also lead to ruin."

Filling Up Your Treasure Chest

Let's take a look at the options available to those who want to invest in precious metals:

Commodity ETFs: Exchange-traded funds exist for all three precious metals. ETFs are a convenient and liquid means of purchasing and selling gold, silver or platinum. Investing in ETFs, though, doesn't give you access to the physical commodity, so you don't have a claim on the metal in the fund. You will not get the actual delivery of a gold bar or silver coin.

Common stocks and mutual funds: Shares of precious metals miners are leveraged to price movements in the precious metals. Unless you're aware of how mining stocks are valued, it may be wiser to stick to funds with managers with solid performance records.

Futures and Options: The futures and options markets offer liquidity and leverage to investors who want to make big bets on metals. The greatest potential profits and losses can be had with derivative products.

Bullion: Coins and bars are strictly for those who have a place to put them like a safety deposit box or safe. Certainly, for those who are expecting the worst, bullion is the only option, but for investors with a time horizon, bullion is illiquid and downright bothersome to hold.

Certificates: Certificates offer investors all the benefits of physical gold ownership without the hassle of transportation and storage. That said, if you're looking for insurance in a real disaster, certificates are just paper. Don't expect anyone to take them in exchange for anything of value.

Precious metals provide a useful and effective means of diversifying a portfolio. The trick to achieving success with them is

to know your goals and risk profile before jumping in. The volatility of precious metals can be harnessed to accumulate wealth.

Precious metals refer to gold, platinum, and silver, as well as other rare materials like iridium and palladium. Base metals, on the other hand, are regularly used in industrial sectors, such as aluminum, copper, iron, lead, nickel, and zinc, among others. You probably know the drill; when investing in metals, there are two kinds, precious metals and base metals.

If you are interested in including these in your portfolio, here are some quick facts to start:

1. Base metals cost less than precious metals. This is because they can be found all over the world and are often mined in large production. In fact, they got their name – “base” – because they are more “common” than the “noble” and therefore more precious metals. Nevertheless, these commodities play an important role in the economy as they are used in the production of goods – from building and architectural materials, to consumer products, automobiles and other important equipment and machines.

2. Growing economies are in constant need of base metals. India is a developing country currently investing in infrastructure, as it seeks to attract more business ventures. China, who has a robust manufacturing industry, is in great requirement of nickel, which is used to make stainless steel.

3. Economists watch the rise and fall of base metal prices closely. It is a great indicator of the overall health of the world economy. Ongoing construction means there is money to spend, and there are jobs being created, which then translates to national income.

4. Supply and demand can greatly affect share prices. Base metal prices change depending on consumer demand or pending any significant economic activity. Lead, for example, is a base metal often used in batteries of vehicles, computers, even emergency systems. Stable demand and production of cars mean that lead prices will continue to increase. Similarly, the iron ore export ban by Indonesia last year has resulted to a rise in the demand of nickel vis-à-vis supplies depleting faster than expected. Hence, nickel prices eventually soared in the market, and then dropped again when China found another supplier in the Philippines.

Nevertheless the share prices of nickel mining companies such as Amur Minerals Corporation (OTC:AMMCF), continue to climb as shareholders and financial analysts still expect a nickel deficit in the future.

5. Some base metals are scrutinized by their grade. That is, the higher the grade, the more valuable it is. This especially applies to iron ore and copper. Indonesia, apart from previously being the world's largest supplier of iron ore, is known for its high-grade output. The ore from the Philippines is of a lower-grade, but China has no choice at the moment but to take its supply.

6. The performance of other commodities in the market can affect base metals. The current oil supply glut has resulted to low oil prices. This, in turn, has also affected the prices of metals, since they use energy in order to be refined or extracted from mines.

7. Mining of base metals is very profitable.

According to statistics, the total revenue of the top mining companies worldwide amounts to about \$512 billion. China leads in the production of primary aluminium, while Australia leads for production of bauxite. Chile leads the production of copper, while China has the highest demand for it.

8. Base metals have a higher chance of retaining economic value than money. Cash is a man-made product, which means it can run out or decrease in value, as well as be instruments of corruption and abuse. Base metals – as well as precious metals – are minerals that come from the earth. These are chemical elements that make up a lot of the things we use today, and it is hard to replace them with other man-made inventions. People continue to mine for base and precious metals because they hold an intrinsic value to our market that cannot be replaced by money.

Base metals such as steel, copper, nickel, zinc, aluminium and lead are trading on various commodity exchanges like the Multi Commodity Exchange (MCX) and the National Commodity & Derivatives Exchange (NCDEX). Let's take these commodities individually and try to understand how good they are from an investment point of view.

Copper: Copper, a key industrial metal used in housing and construction, is currently the most attractive investment avenue, due to the increasingly bullish supply/demand fundamentals. Another important reason for copper demand is the bullish sentiments over the launch of copper exchange traded funds (ETFs). Other than providing good returns, having a direct stake in commodities can also protect your portfolio from soaring inflation. JP Morgan is among the first which has made a filing with US Securities and Exchange Commission for launching for Copper ETF. This has boosted investment demand in the industrial metal. In 2010-11, the price of copper surged 21% to Rs 428 per kg.

Zinc: Zinc prices witnessed a fall of 9% in the first half of 2010-11, but recovered in the second half finishing at Rs 104.65 per kg on March 31, 2011, lower by just 1.74% against March 31, 2010. "The sovereign debt crises in Europe, inflation fears in China, weak housing data in the US and excessive supply of zinc kept prices under pressure.

Lead: During the financial year 2010-2011, lead prices managed to gain around 26% on the back of strong demand from the battery industry. The principal consumption of lead is for lead-acid batteries which are used in vehicles, and in emergency systems as well as in industrial batteries found in computers and fork-lift trucks. Lead demand has managed to keep growing as demand for lead-acid batteries expands as more number of cars is being produced. During March 2006-March 2011, lead prices rose 130% to Rs 120.75 per kg mainly due to strong battery demand in China.

Aluminium: The price of aluminium is likely to remain strong on the back of robust demand from automobile sector in the long term.

During 2010-11, the price of aluminium on MCX gained 12.54% to Rs 116.20 per kg. "Aluminium price surged with demand from global market recovering. The auto sector has been one of the largest drivers of aluminium demand, especially in the United States and China. The bearish sentiment is on the back of increased tensions in MENA region and spike in crude oil prices which threatens the global economic recovery. Overall, the long-term trend is bullish and we expect prices to continue their rally and see another 10- 15% jump.

Steel: During the financial year ended March 31, 2011, steel prices rose by around 6% to Rs 30,600 per mt. Market experts believe that steel witnessed a rally due to decrease in the supply by China. "Steel prices have witnessed a rise last year as cutback of production in China coupled with rise in coking coal prices supported prices. In India, the price rally began in mid-December 2010 on the back of supply disruption of coking coal from Australia.

2021 Total Revenue Chart

2022 Base Metal Portfolio Volume

HOW IT WORKS

- Create an account and verify email address.
- Pass through Know Your Customer (KYC) procedure.
- Fund with a minimum of \$50 or any amount of choice above \$50
- Withdraw weekly profits

To invest, make a deposit in BTC, USDT, BNB, ETHEREUM, or USDC.

To withdraw, fill BTC wallet address to receive profits.

WHY CHOOSE US

- No Fees
- No Trading Knowledge required
- Pro Traders
- Must not recruit to earn
- Long-term investment company
- Extremely fast weekly profit payouts
- Choose from 2 weeks to 480 weeks
- 24/7 multilingual support
- To discontinue, a terminate trade button available for deposit refund.

THE INVESTMENT PLANS

ELITE SMART

Minimum Investment: \$50
Weekly Return: 6%
Amount Paid Out Per Week: 70% of 6%
Amount Auto-Compounded Per Week: 30% of 6%
Referral Bonus: 4%
Indirect Referral Bonus: 3%
Management Commission: 0%
Maintenance Fee: 0%

ELITE MAX

Minimum Investment: \$5,000
Weekly Return: 6%
Amount Paid Out Per Week: 0% of 6%
Amount Auto-Compounded Per Week: 100% of 6%
Referral Bonus: 4%
Indirect Referral Bonus: 3%
Management Commission: 0%
Maintenance Fee: 0%

ELITE PRO

Minimum Investment: \$100,000
Monthly Return: 10%
Referral Bonus: 4%
Indirect Referral Bonus: 3%
Management Commission: 0%
Maintenance Fee: 0%

ELITE SMART (6% weekly ROI)

Pays 6% weekly profit to investors for a total trade calendar contract duration chosen from 2 weeks – 480 weeks (10 years) as preferred by the investor.

HOW "ELITE SMART" WORKS:

70% of 6% weekly ROI is paid out to the investor every week while 30% of 6% weekly ROI is automatically compounded adding to the previous week's capital to help an investor earn higher amounts and save at the same time.

MINIMUM DEPOSIT: \$50

Below is a table illustration for the Elite Smart Plan using \$20,000 as a trade instance for clarification purposes only; to show how the investment plan works. Please use the investment calculator on our website homepage to calculate your investment.

<https://e-globalfunds.com/pages/calculate>

16 weeks is only used in this instance for clarification purposes only; as you can select from a trade duration of 2 weeks – 480 weeks.
